

JS RESIDENCE

by The Crossboundaries

buildōfy®
made with love in India

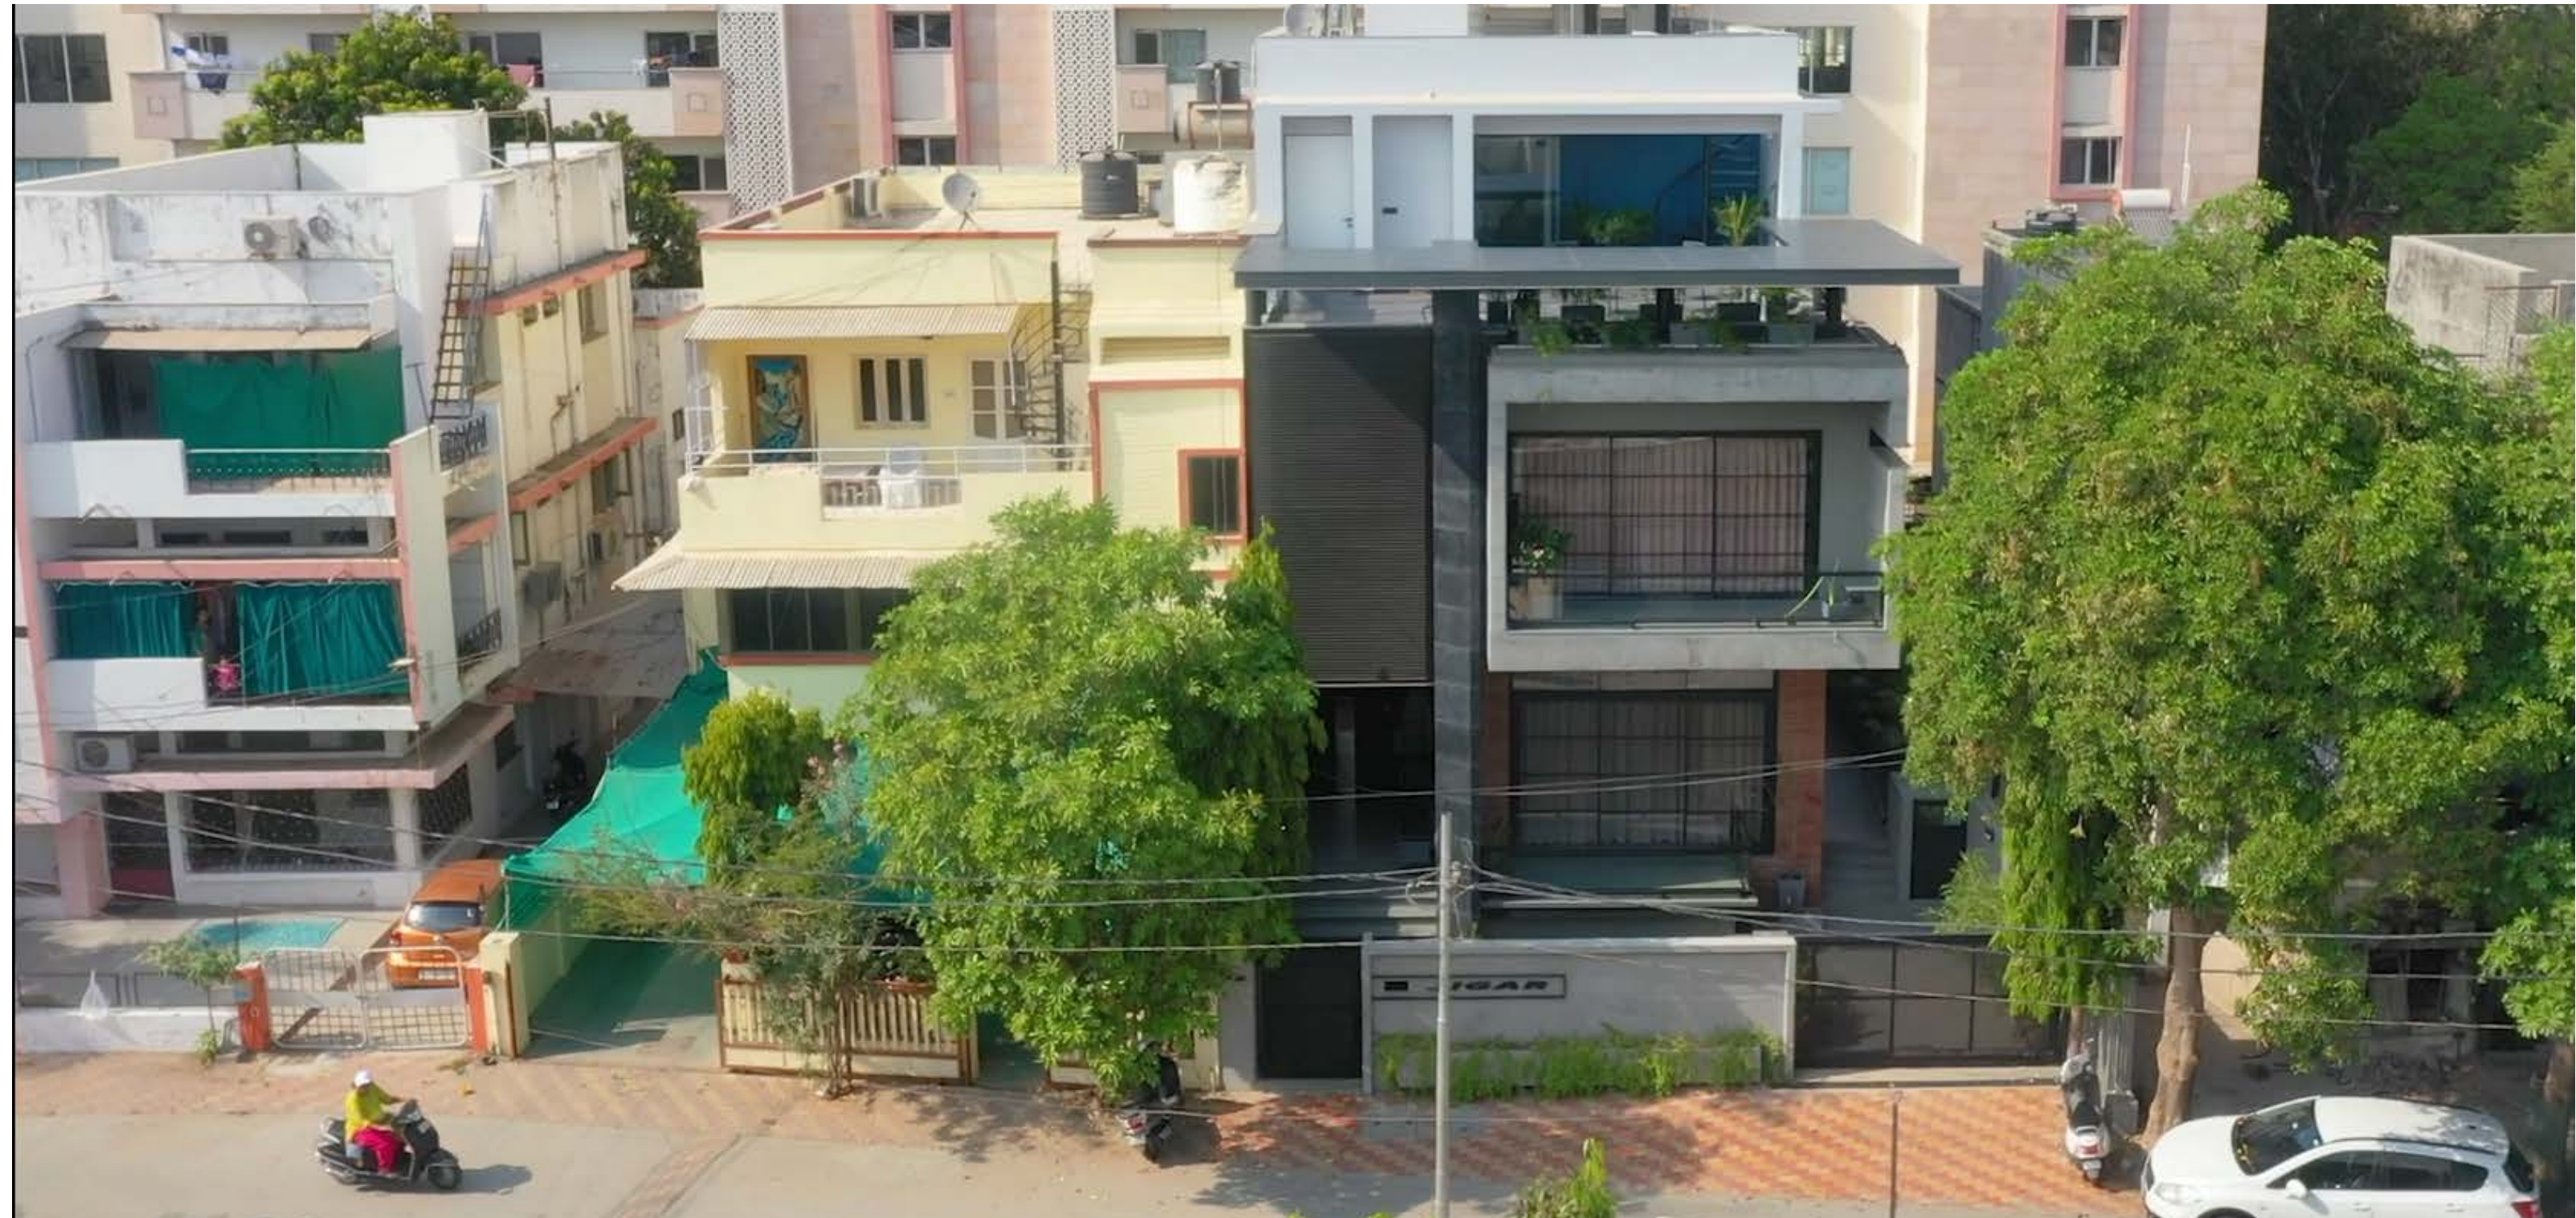

Project Location	: Manjalpur, Vadodara, Gujarat
Architectural Firm	: The Crossboundaries
Principal Architect	: Vijay Dabhi
Design Team	: Forum Jariwala, Rishab Prajapati, Neel Patel
Plot Area	: 2,700 sq. ft.
Built-up Area	: 5,000 sq. ft.
No. of Floors	: Ground + 2
No. of Rooms	: 4
No. of Car Parks	: 1
Timeline	: Mar 2019 - Sep 2021
Vastu Compliance	: Yes
Project Budget	: INR 4,600 per sq. ft.

“The JS Residence brings in nature and introduces shapes, colors, and textures in a new way to create a harmonious design.”

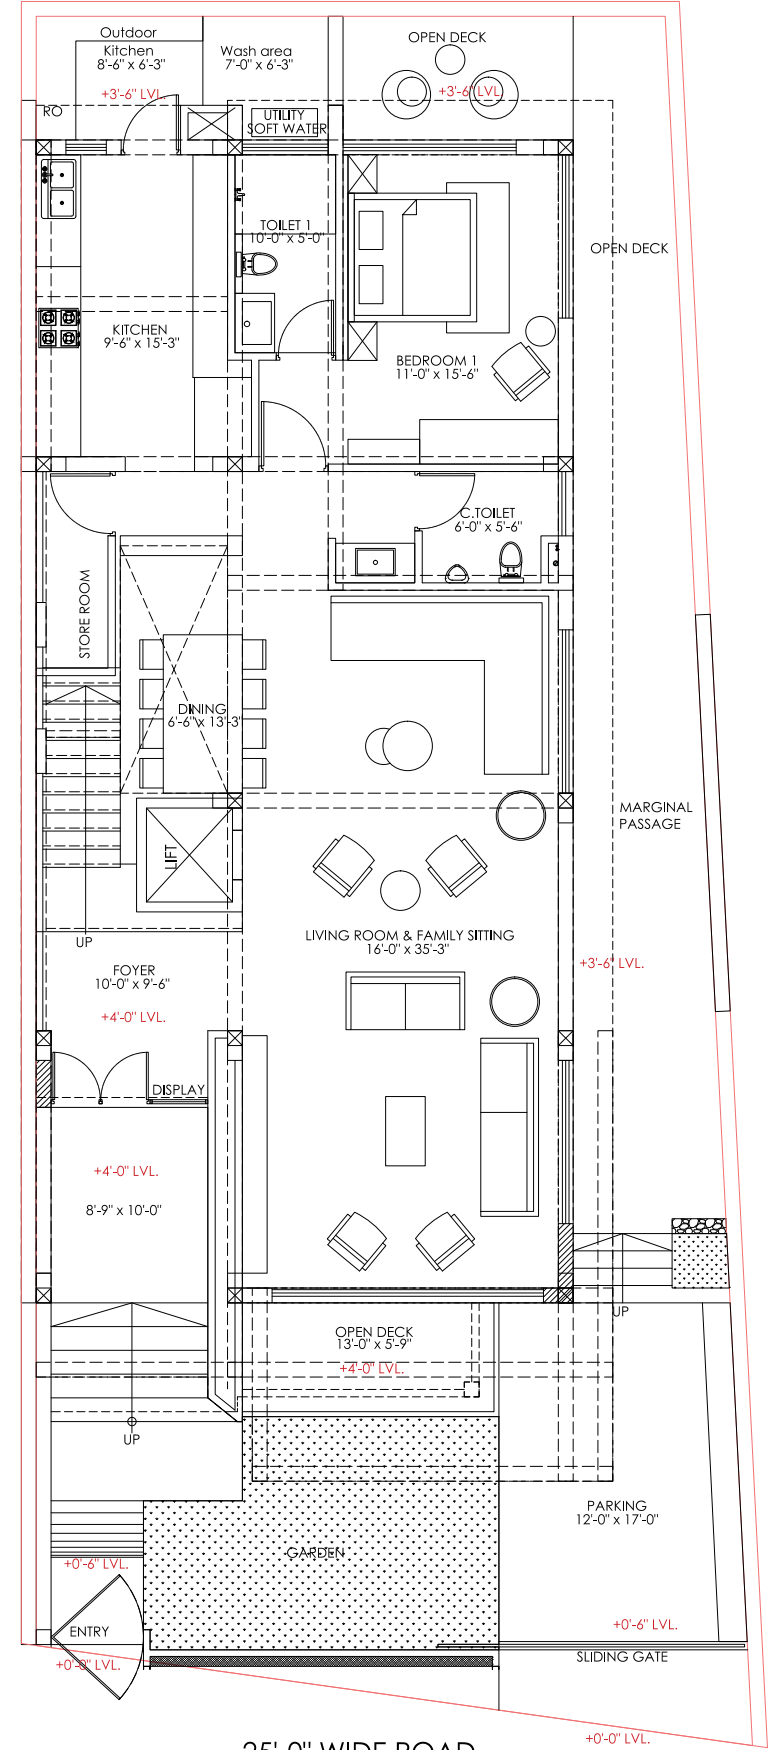

Design Ideology

This family home is designed to have a comfortable lifestyle and upgraded living experiences. It is designed on the principles of contemporary minimalism as its soul while searching for textures, surface finishes, and the rawness of the material palette.

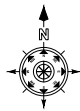

Site Plan and Layout

Located in the rapidly developing Manjalpur area of Vadodara city the residence is set on a 2600 sq. ft. plot and is open to new amenities and public spaces. Rebuilt on the grounds of an older family home, the house is designed to introduce the outdoors to the indoors by bringing in greenery and natural light. The house shares a wall with the adjoining house leaving the other three sides open to invite light.

Ground Floor Plan

Ground Floor

A 10 ft. tall door tinted with grey mirror and a slit fixed with clear glass, brings one inside where a sculptural wall diverts one into the living room. The ground floor houses the social and semi-social areas including a living room, family room, an open dining, and closed kitchen area, and a bedroom. The design follows an open plan approach for seamless connectivity.

Entrance Foyer

Access to the house is guided by a cavity wall clad in black *kadappa* stone that runs vertically from the foyer to the terrace. This highlights the character of the main door making it the focal point of the facade. As one enters in, they are welcome with a full-height in-situ wall art made in concrete depicting the Indian God, Lord *Mahaveer* thus keeping the first appearance of the home elusive.

Living Room

The ground floor has an open floor layout with a separate living & family area. An exposed brick accent wall stretches along both spaces. Large openings invite ample light inside and the interiors extend out to a garden outside. Automated lighting runs along the 12 ft. high exposed concrete ceiling design in both spaces. The family room has a minimal and subtle color palette that sets the mood while patterned rugs and vibrant upholstery add a textural element.

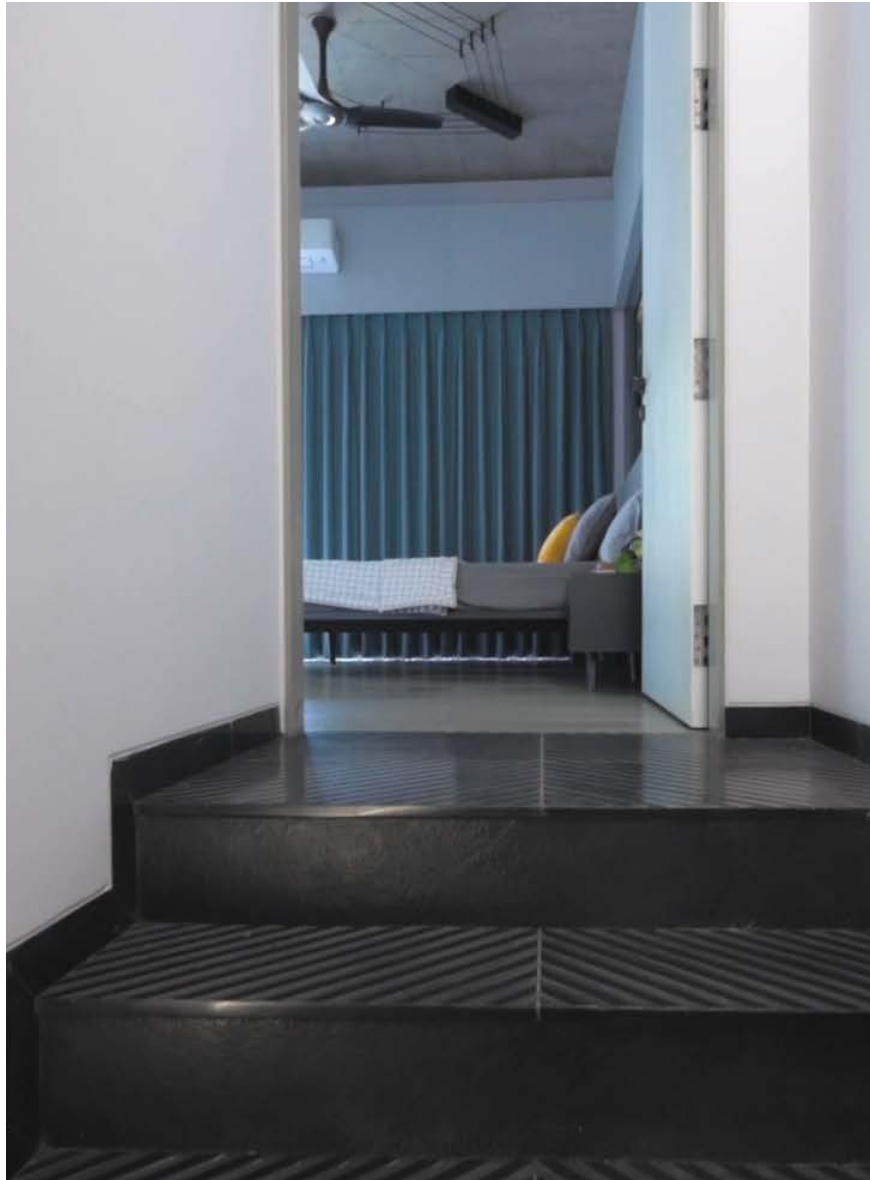

Dining Area

Adjacent to the family seating is a dining area. The dining table made in Wimborne white is levitated against a mural wall to provide the space with a minimalistic and clean look. The mural depicting life in nature is designed against exposed concrete that enlivens the experience of this space. The mural wall runs vertically through all the floors connecting them physically. A distinctive staircase with storage below it becomes the backdrop of this noteworthy dining area.

Kitchen

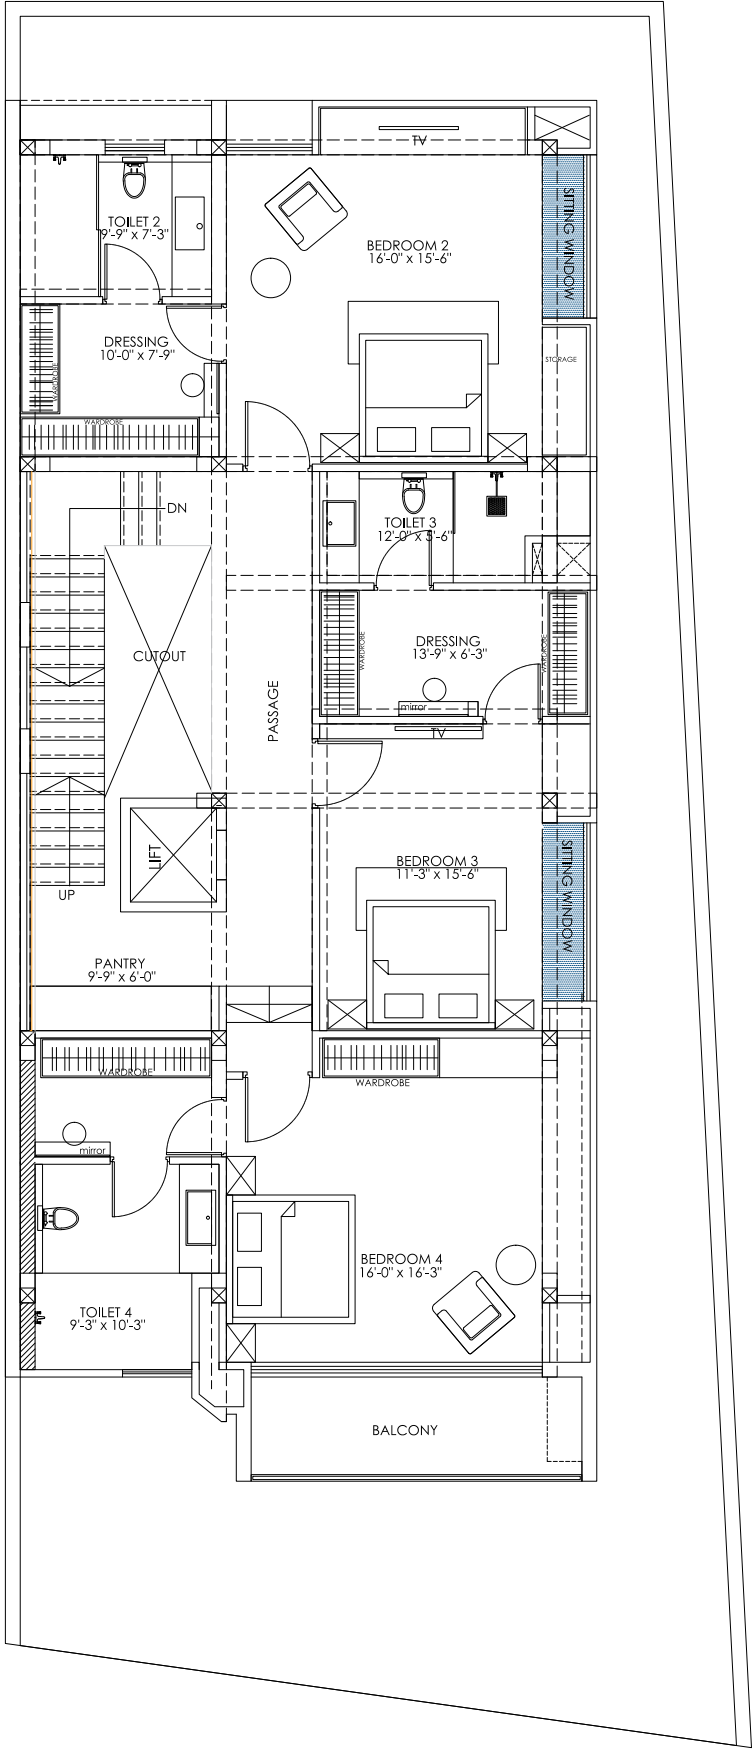

The kitchen is kept separate to maintain privacy while in use. Shades of pristine white and azure blue form a unique material palette enhancing the mood of the space. The kitchen catches one's eyesight with its' stunning smooth finishes and an admirable color palette while also being truly utilitarian.

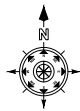

Guest Bedroom

The guest room has a balanced mood board with walls exhibited in navy blue and fog grey. A distinct material added to this composition is the wicker cane shutters with wooden frames in the bed back as well as the wardrobe. An adequate amount of natural light enters through punctures in the wall opposite the bed.

First Floor Plan

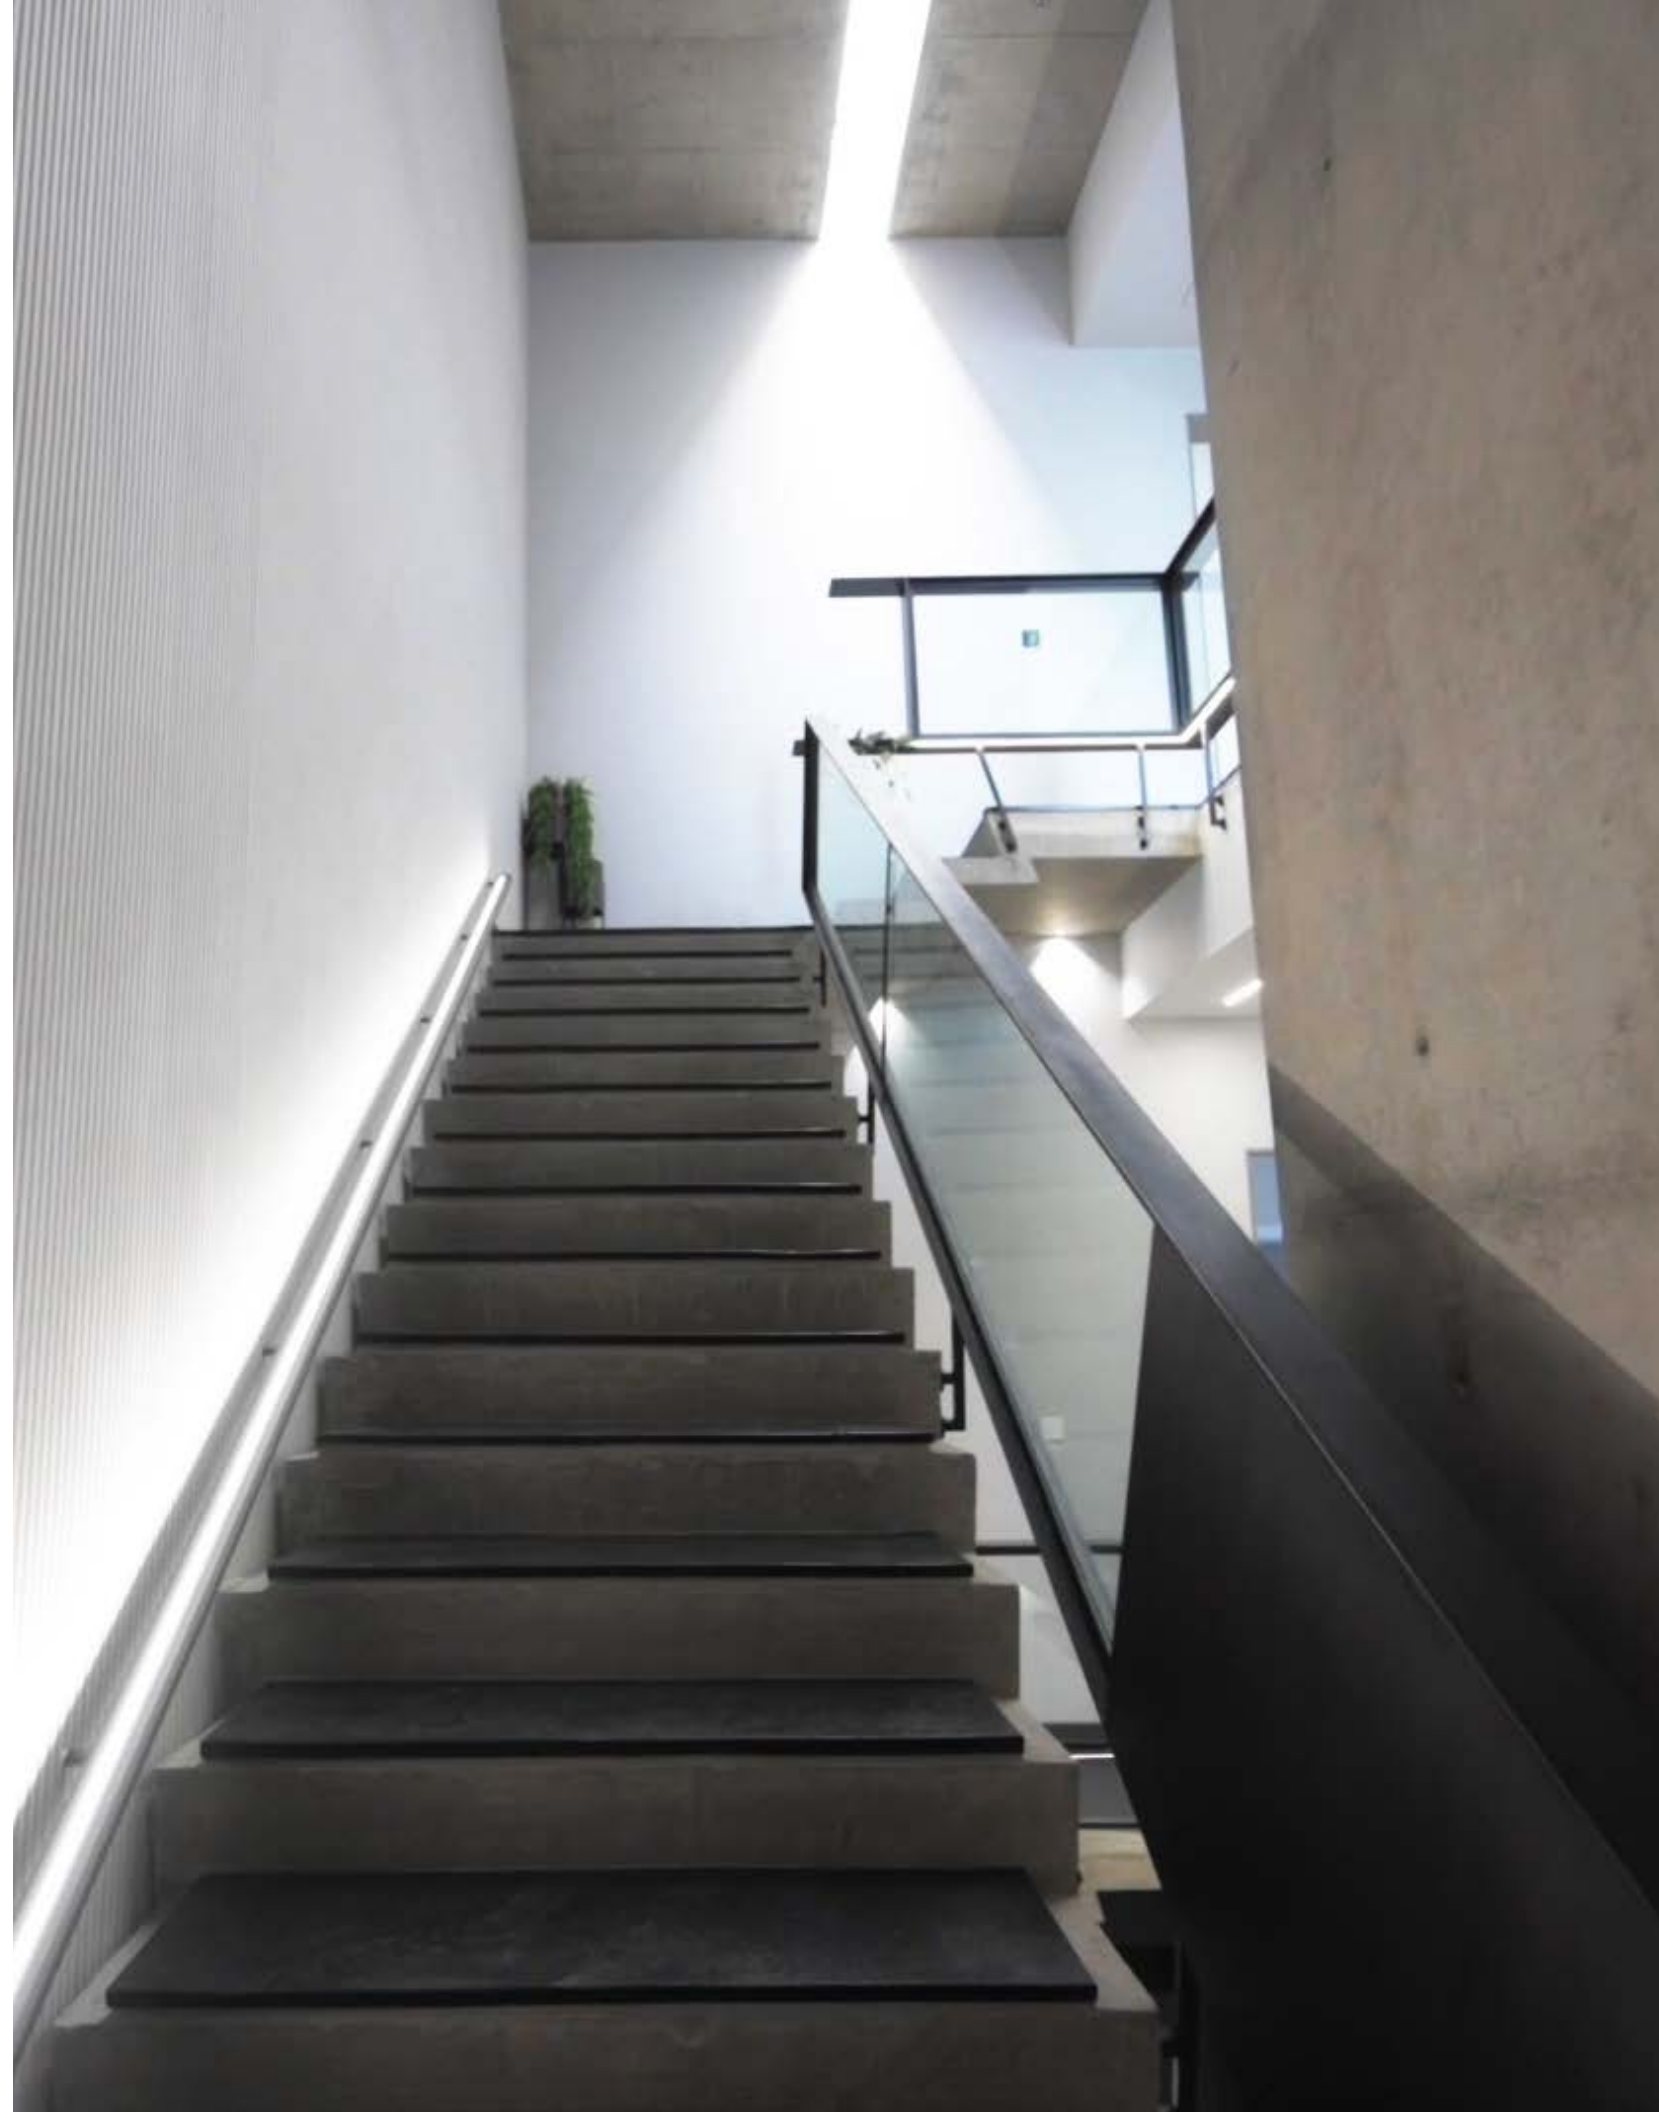

First Floor

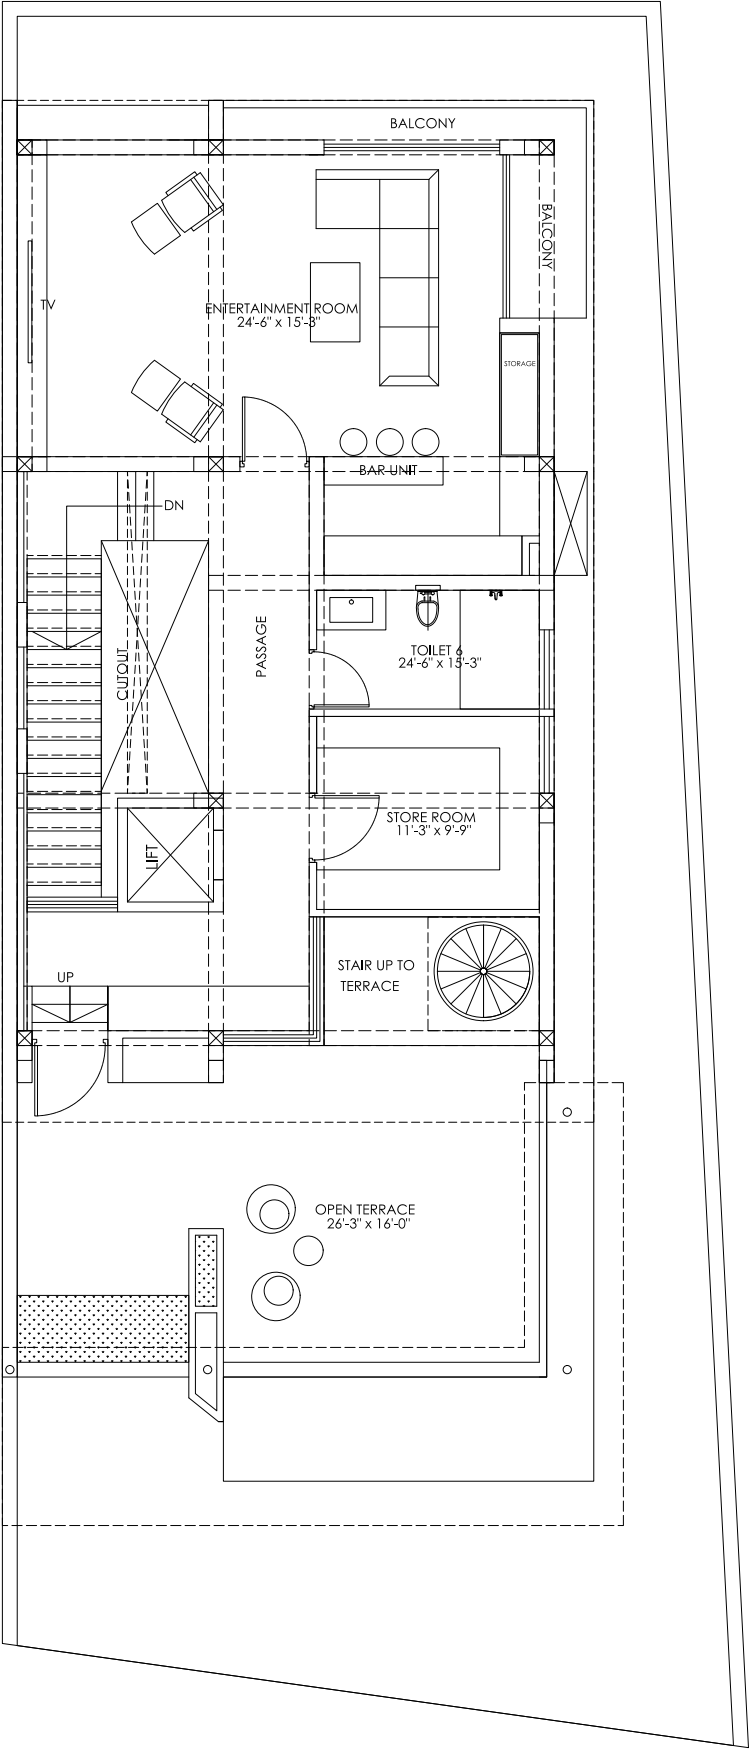

The first floor houses the parents’ bedroom along with their two sons’ bedrooms. A passage connects the three bedrooms and overlooks the floor below through the staircase courtyard. Large seamless fenestrations at the end of the passage bring in ample natural daylight throughout the passage. Black *kadappa* stone having a *gaalicha* pattern form the flooring for the passage.

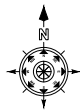

The Staircase

A remarkable staircase forms the backdrop of the dining area taking one up to the higher floors. The staircase body cast in concrete has treads of black *kadappa* stone offset from the edges to show its profile as a design element. The handrail is custom-designed in a combination of clear glass framed in matte black MS box. A monolithic wall having consistent vertical grooves throughout its height accentuates the staircase further.

Second Floor Plan

Second Floor

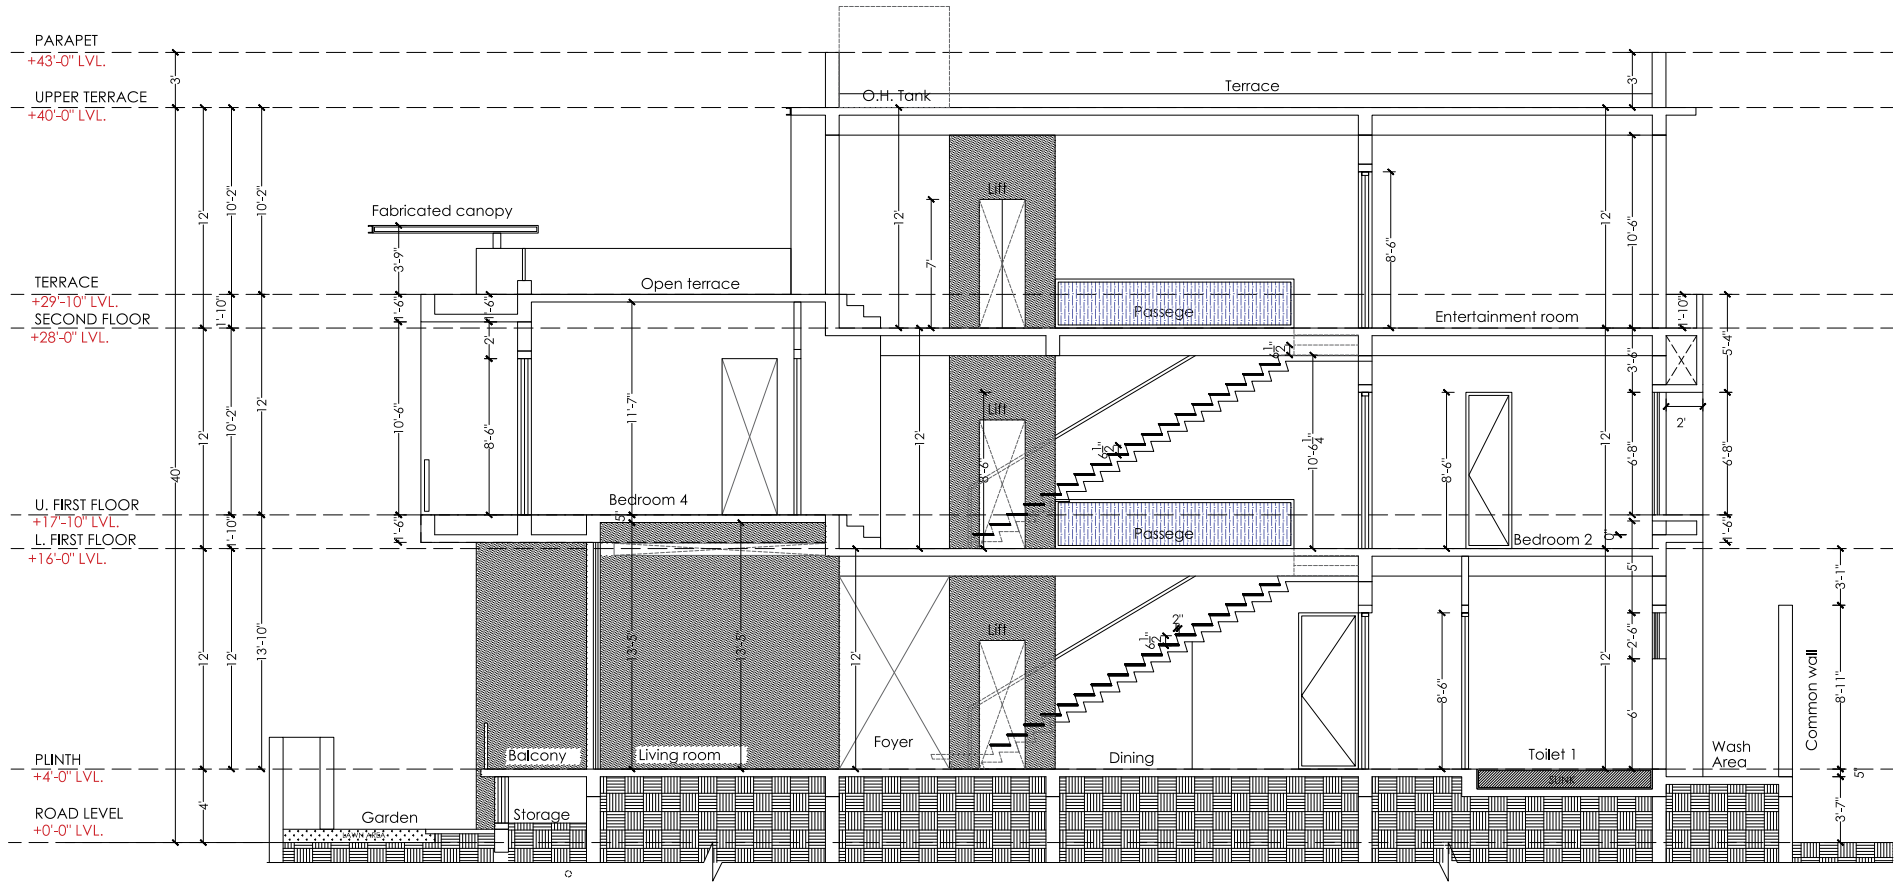

The second floor of the house is kept fairly semi-social by providing an entertainment room along with a bar and an open terrace. The passage overlooks both the floors below from the cut out thus connecting every floor vertically.

Entertainment Room

The entertainment room is an exciting space to step into. Acoustically treated walls with precise linear grooves in deep blue and depressed perforations in the slab appear aesthetically pleasing and cater to the acoustic requirements. An ambient two-way profile light runs along the periphery of the room and avocado-green couches elevate the aura. A bar unit suspended from the ceiling looks feathery light and sets up the mood.

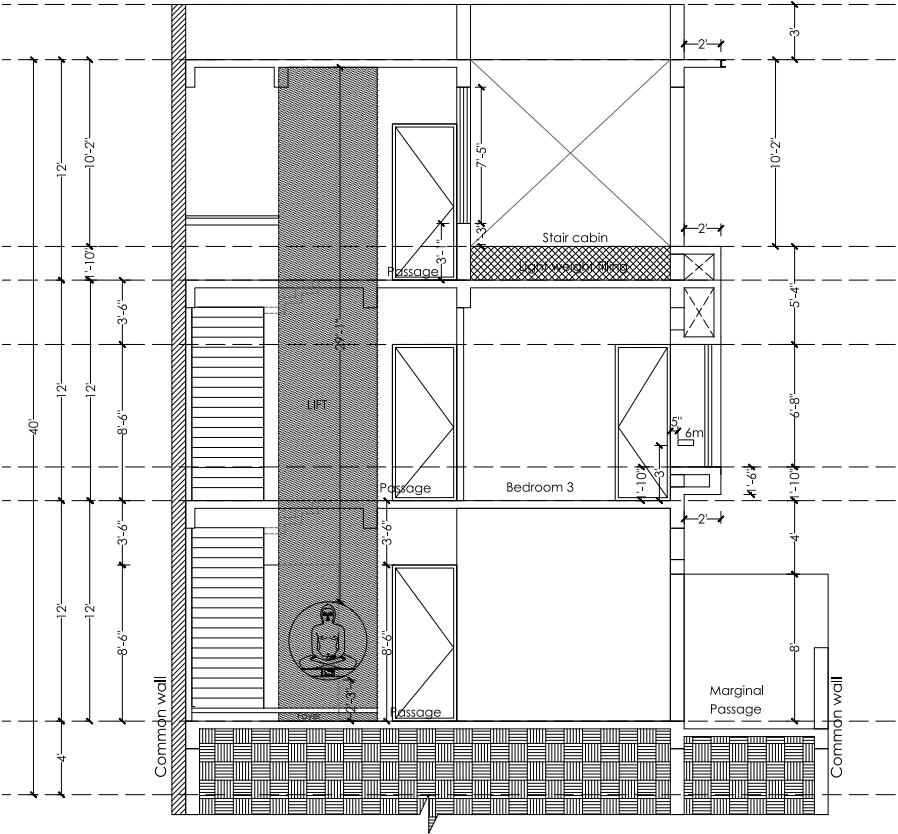

Section A-A'

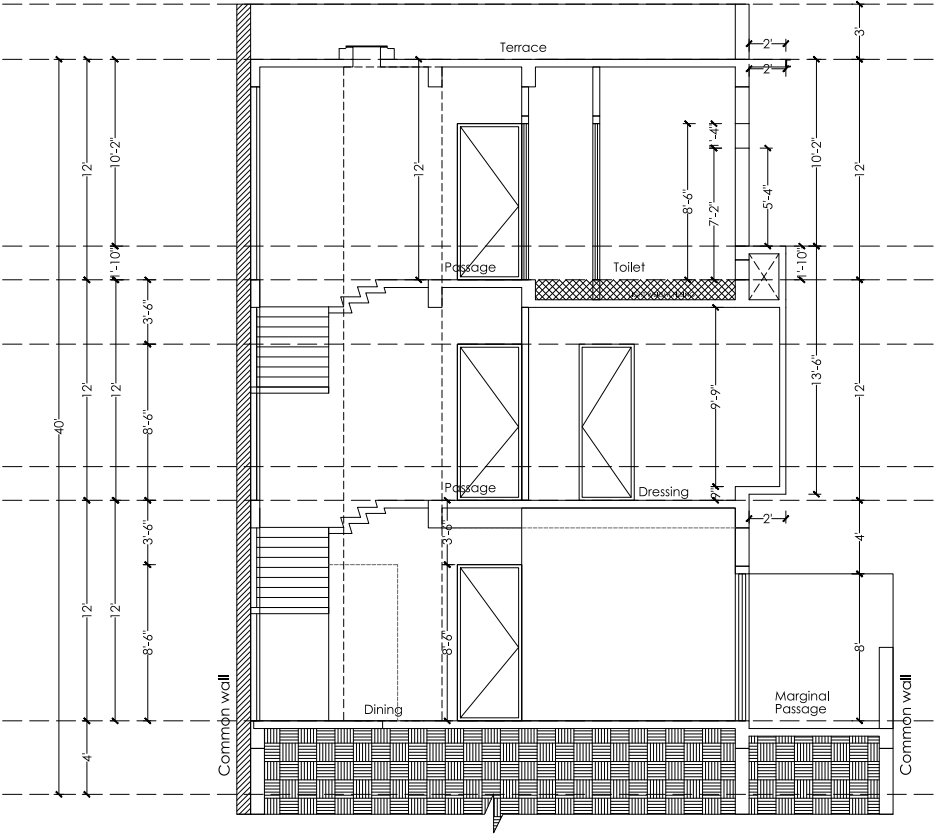

Section along the Passages

A section along the passages also cuts across the living and dining area and highlights the staircase that connects all the floors. Passages on the upper floors have bedrooms flanked on each side which further open outwards and bring in ample light and ventilation to the rooms. A protruding canopy on the terrace also becomes a railing for the terrace.

Section B-B'

Section C-C'

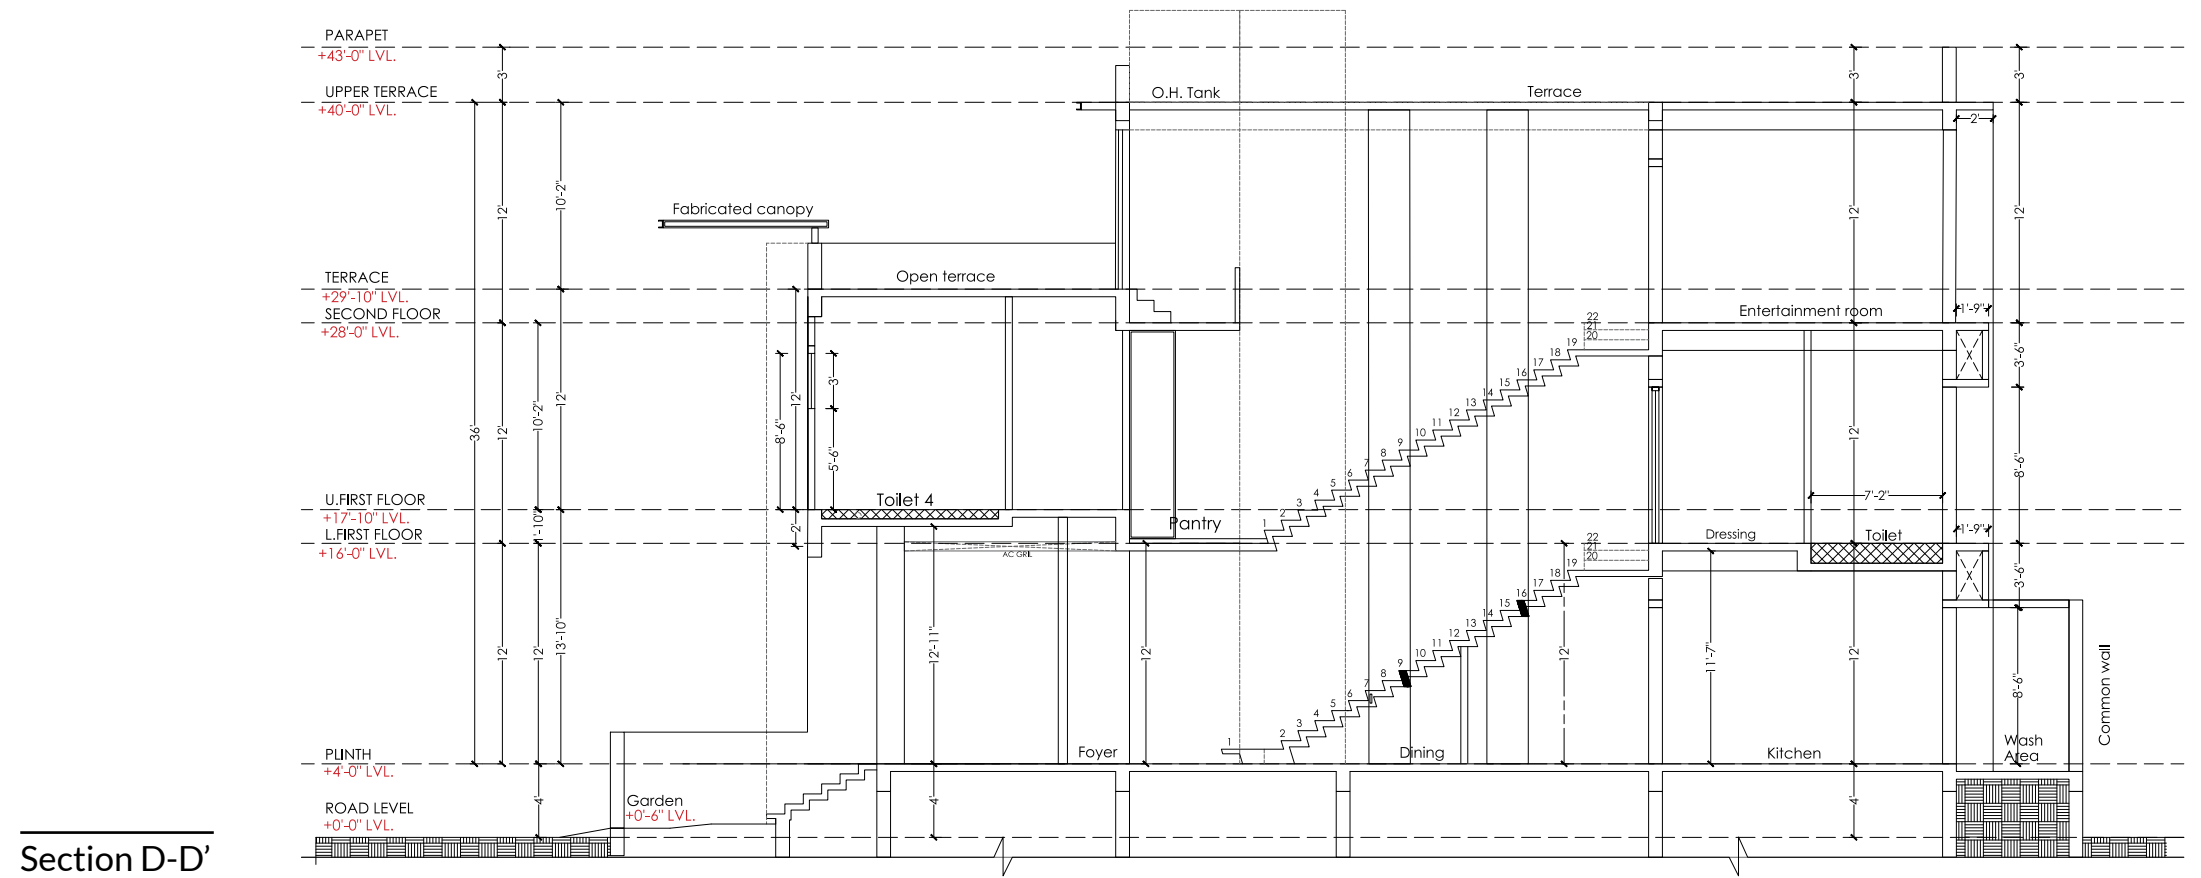

Section across Staircase & Bedrooms

Both the sections across the staircase highlight the connection of every floor through the full height cavity along the passage. A slit on the ceiling of this cavity lightens up the staircase making it a focal point. The bedrooms have been provided with extra spaces on the facade to accommodate storage and seating giving beautiful views of the outdoors.

Master Bedroom

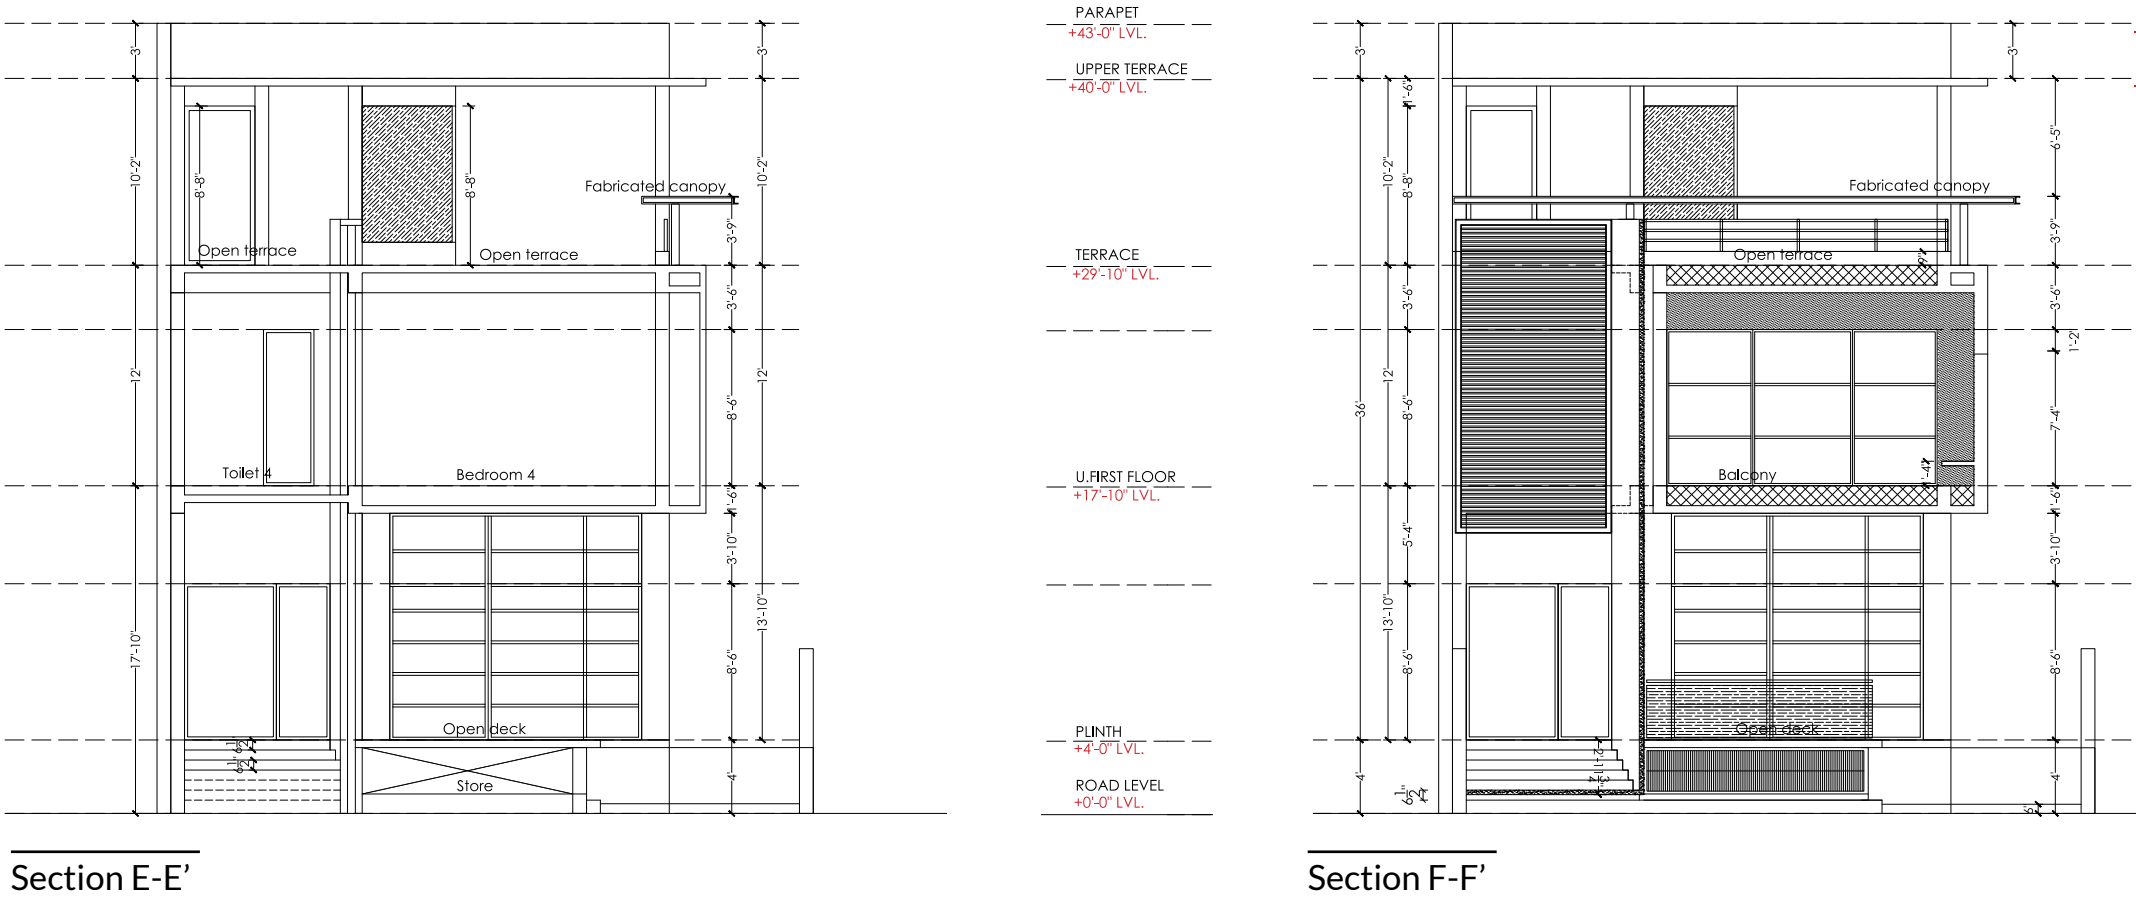

The parents' bedroom is flamboyant with minimal design and natural materials. The material palette of this room consists of wooden finishes against exposed concrete. The bed back has a unique green linear texture that continues on the flooring as well. The texture also becomes a backdrop for a night lamp inspired by the crescent moon. A corner window brings in an adequate amount of natural light into the room.

Section along the Staircase

A section along the staircase highlights the structural details of the concrete staircase. Black *Kadappa* stone forms the treads and continues throughout the passages connecting the bedrooms.

Section along the Deck

A section along the deck in the front of the house highlights the structural elements in the elevation. Large full-height fenestration for the living room adds a sense of porosity to the house and brings in ample daylight. The living room extends out to the deck to enjoy leisurely evenings. Above the deck is the balcony of the bedroom providing panoramic views.

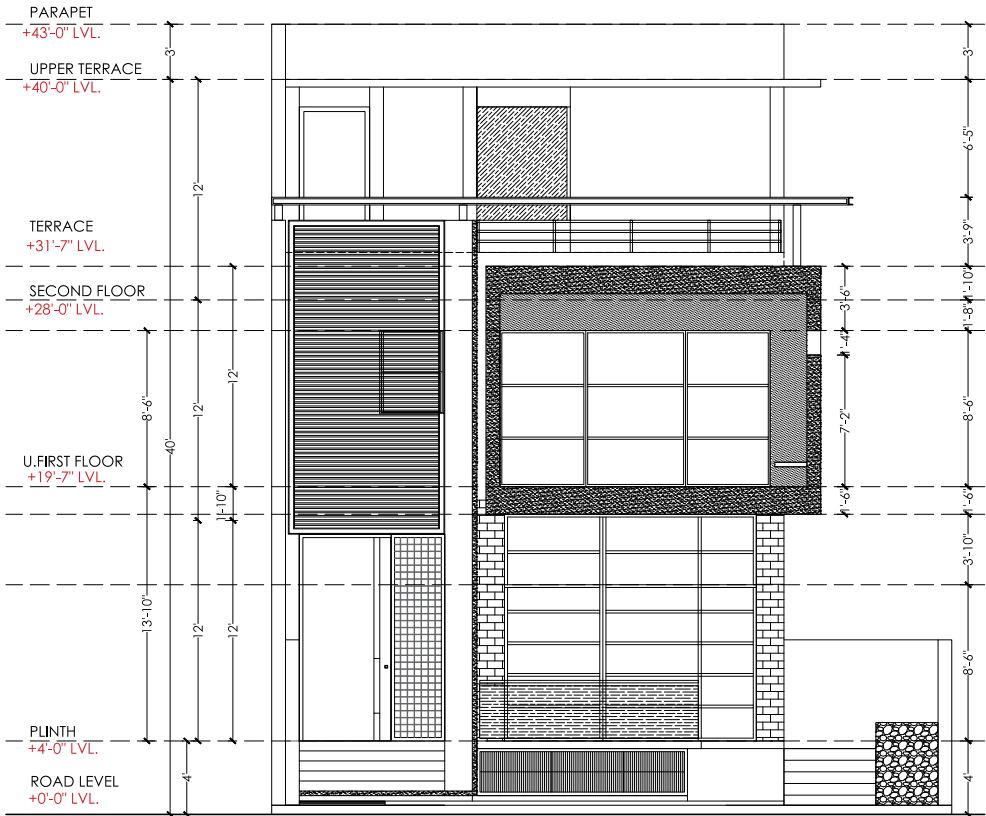

Elder Son Bedroom

Illuminating wall art against hues of peach and greys leave the room looking fresh while flooring made of green *kota* stone having a *gaalicha* pattern adds humbleness to the elder sons’ bedroom. Exposed concrete forms the backdrop of the TV unit and continues on the ceiling which has surface lights and an exposed electrical grid. A folding study table and concealed storage spaces optimize the room for maximum usability.

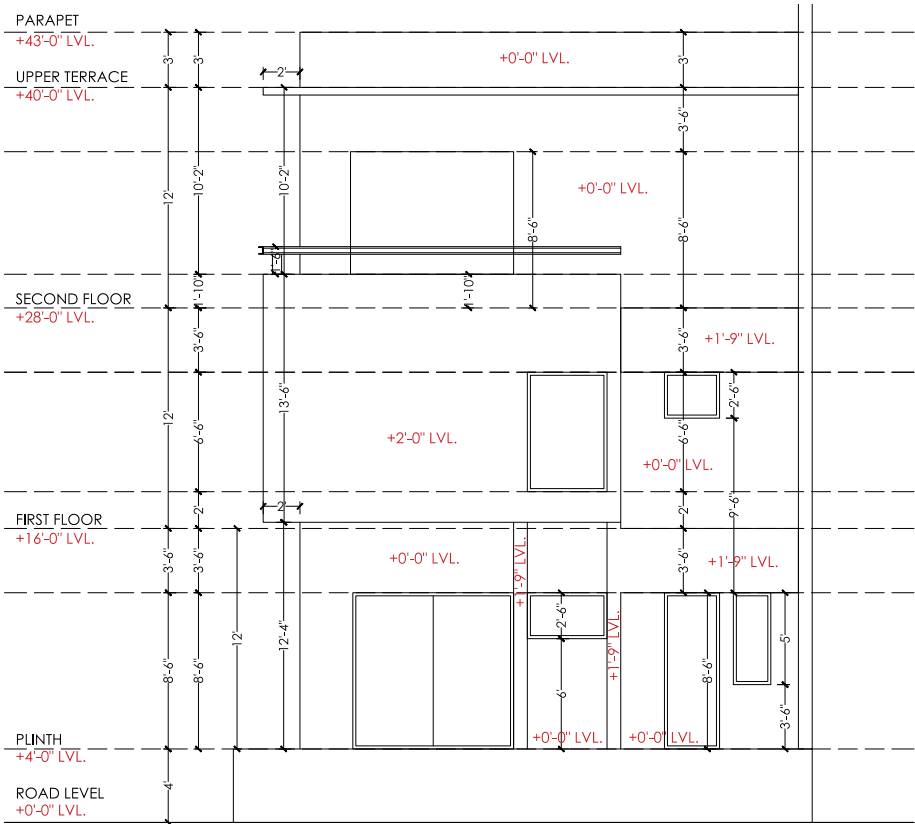

Younger Son Bedroom

The younger son’s bedroom has contradicting visuals, with a dramatic color scheme of bold black and smoky greys. A 4 ft. raise in the floor makes the room cozy and comforting. An exposed light web forms an interesting ceiling in this room. An attached balcony towards the front of the house provides panoramic views. A sleek MS profile and glass form the railing of the balcony making it barely noticeable to the eye. A dark grey PU door for the dresser merges with the wall behind the bed.

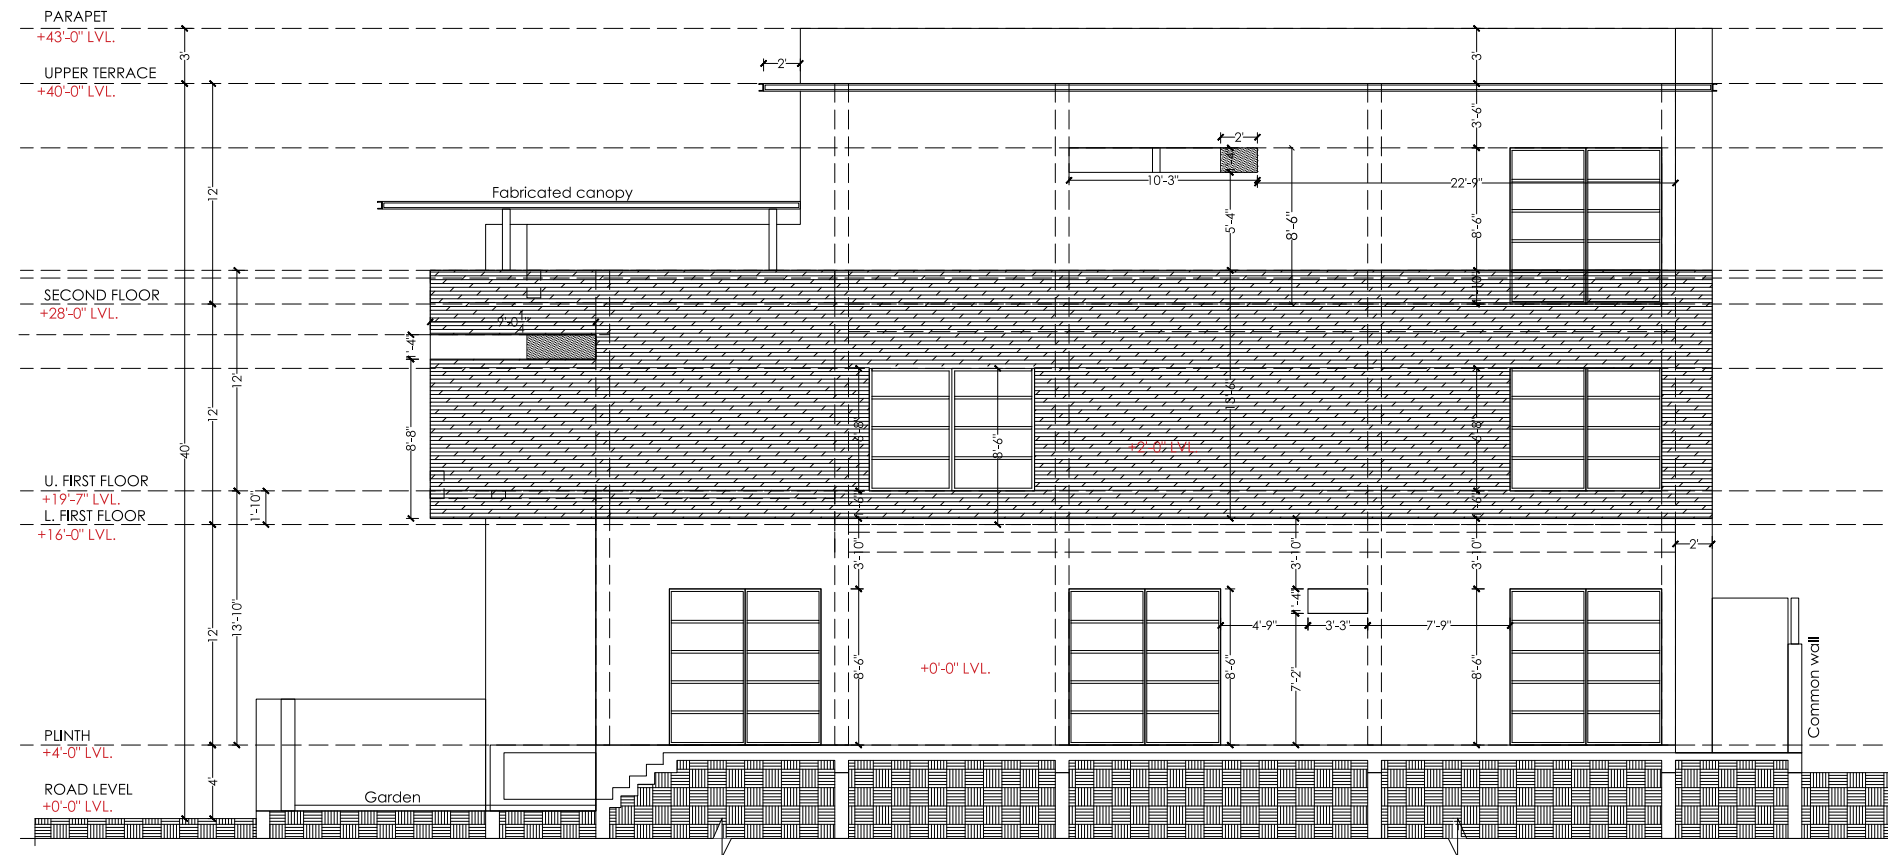

Front Elevation

Rear Elevation

Front & Rear Elevation

The front elevation of the house is designed to have multiple structural elements that highlight the facade. An inviting entrance foyer and large fenestrations give glimpses of the living room. A vertical member clad in black kadappa stone runs up to a protruding canopy on the terrace on the top level. The bedroom and balcony on the first floor are framed in exposed concrete becoming a focal point in the elevation. The rear elevation is kept fairly minimal and functional as per requirement.

Side Elevation

Side Elevation

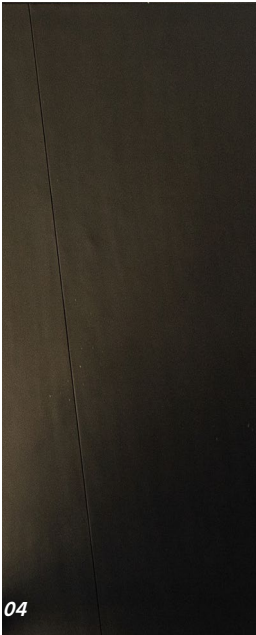

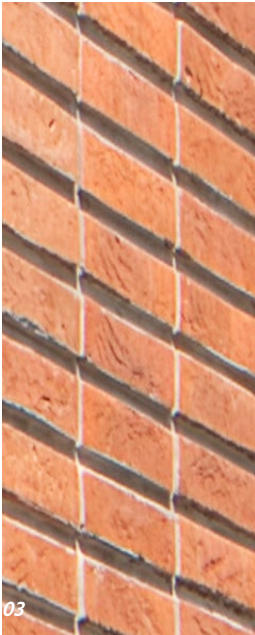

The side elevation of the residence faces the neighboring house and is thus kept plain with just a few openings in metal frames bringing in light and ventilation. Exposed concrete on the first floor and exposed brick on the ground floor highlight the facade on this side.

Conclusion

Every space in the house is designed to make maximum possible connections amongst themselves. Art, design, and nature are integrated into every nook. The architects' affinity to clean lines, neat finishes, and a luxurious glow are reflected in their use of art installations that add life to spaces.

Exterior Wall Finishes
01/ Exposed Concrete
02/ Black Kadappa Stone
03/ Exposed Brick
04 / ACP Sheets

Internal Wall Finishes
05/ Concrete Putty Finish
06/ Acoustic panels

Flooring Finishes
09/ Mirror Finish Kota stone
10 / Textured Green Kota
11 / Black Kadappa stone

Unique Material Applications

Cladding:	Black kadappa, exposed brick & mirror finish kota from Baba Marble & The Brick Store
Windows:	Cara Doors & Window systems from Greewor
Lighting:	Light box
Color:	Asian Paints
Sanitaryware & Bath Fittings:	Kohler
Furniture:	Better Living
Furnishing:	D’decor from Dream Furnishings
Wallpaper:	Purple Armani from Marshalls
Carpets & Rugs:	Hands
Hardware:	Kich
Modular Kitchen:	Prato Kitchens
Kitchen Sink:	Nirali
Plywood:	Greenlam
Veneers:	Timex
Laminates:	Royal Touche
Security & Home Automation:	DTI Automation
Air Conditioning:	Daikin
